BIM MANAGER SUITE

BIM Manager Suite contains extremely powerful tools designed to help BIM managers improve the efficiency, accuracy and depth of BIM management tasks. The intuitive interfaces and workflow-based processes of each tool can eliminate hours of tedious BIM management work with each use.

- Dig deeper into projects, families and parameters to find common problems
- Powerfully process Revit project links, shared parameters, types, dimensions, CAD data and more
- Clean, prepare and broadly apply standards to multiple projects and libraries in hours, not days

FREE TOOLS After 14 day trial expires, these tools will remain fully functional

Family Tools

Family Tools makes it easy to work with files commonly used to create Revit Families. Delete the “backup” files Revit creates when working on families, work with type catalog and Shared Parameter files.

Project Cleaner

Project Cleaner deletes views, sheets and Revit links. Lighten models from consultants before linking them into your projects. Removing information from a Revit model is important to protect intellectual property and also to help reduce the file size of models prior to being linked into projects or prior to sending projects to outside consultants.

Revision Cloud Remover

Revision Cloud Remover removes non-issued revision clouds from your project. List the revision clouds in a project, including the quantity of each. Select which revision clouds to remove, or remove all of them.

PREMIUM TOOLS These tools are available with purchase of the CIM Project Suite.

Dimension Checker

Dimension checker identifies dimension strings using the dimension override options and presents the results for review. Additional filter options can be used to narrow the search results.

Family Processor

Family Processor is a tool that allows you to define one or multiple changes to one or more Revit family files, and then process those changes in batch.

Family Checker

Family Checker aids in the evaluation of Revit families against common criteria. Check one file or entire folders of families for consistency with shared parameters, parameter groups and common naming guidelines. Family Checker reports the status of each family on approved shared parameters, geometric constraints, materials, hosting and more.

Import & Link Manager

Import & Link Manager assists with locating and managing CAD objects within a Revit model. Find imported or linked DWG files in your Revit project. Batch change workset assignments of imports or links.

Schedule Parameter Resolver

Schedule Parameter Resolver makes it fast and easy to synchronize multiple schedules with the right parameter information by changing the parameter definitions in the schedule to match the parameters used in families within the project, without losing the schedule formatting.

Shared Parameter Manager

Shared Parameter Manager re-organizes shared parameters via drag and drop, both within a single shared parameter file or between two files. Load shared parameters into projects based on reusable selection sets.

Type Swapper

Type Swapper makes swapping types, and even families, no longer a time-consuming process. Discover the simplicity of identifying and deleting duplicates.
