

# Go Live with BIM 360 Design + Docs

**B** AUTODESK®  
BIM 360® DESIGN + **B** AUTODESK®  
BIM 360® DOCS

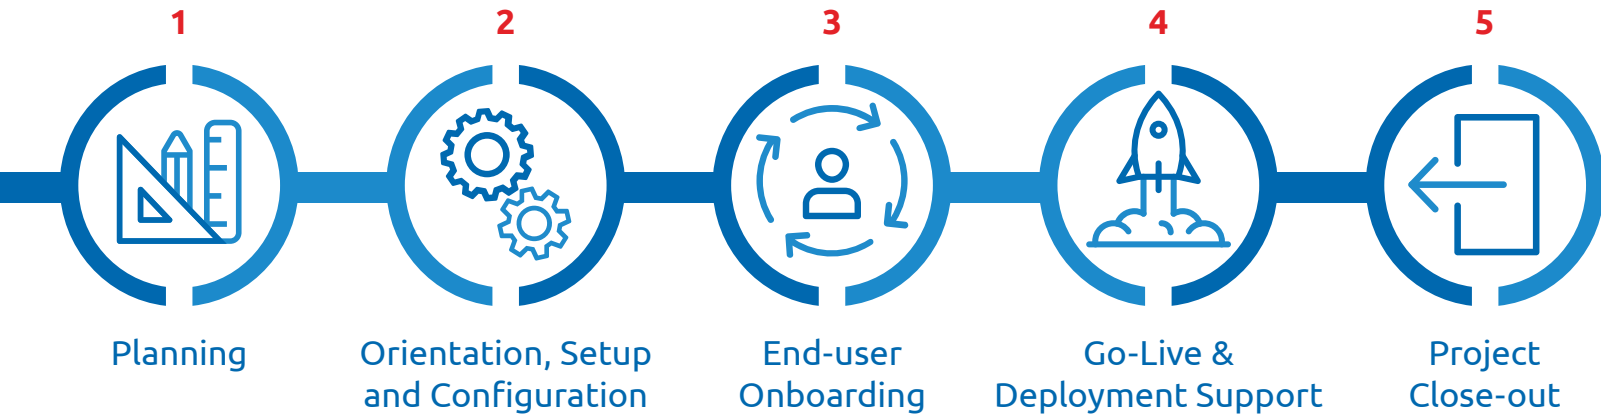

Our SolidCAD team has designed the ultimate BIM 360 bundle for you. This offer includes implementation, training and support that will help your team from start to finish and ensure you have everything you need to get your next big project going in BIM 360 Design + Docs.

The **Go Live with BIM 360 Design + Docs** bundle is the perfect solution if you are looking to:

1. Collaborate and connect design and construction processes with project teams in a BIM centric platform
2. Work on cross-functional and multi-disciplinary projects or co-author central models by extending Revit work-sharing to any location
3. Participate on a project you were invited to using BIM 360
4. Set-up multi-office collaboration within your company
5. Migrate from Collaboration for Revit (C4R) or Revit Server to BIM 360 Design and Docs

BIM 360 is a solution that connects your technology and links information, people and processes throughout the entire project life cycle. With BIM 360 Design and Docs you can bring together data from all phases of the project connecting your relevant data in a central place to get insights, and help your team make right decisions for the job via real time collaboration.

## This bundle includes the following services:

### 1. Planning

The first step is to organize a planning session to review your current and desired collaboration workflow, folder structure, user's current roles and other requirements.

Our team will help you establish goals and outline new roles and responsibilities to implement BIM 360 and initiate the project kick-off.

### 2. Orientation, Setup and Configuration

Along with your team, SolidCAD will help configure your organization's site and review administrative setup.

### 3. End-user Onboarding

Our technical team will provide onsite training for the Administrators, Project Admins, End-users and staff from the partnering firms on the project. In addition, we will configure the software and develop project setup of folders, users and permissions to ensure the software is implemented correctly.

### 4. Go-Live & Deployment Support

SolidCAD will be there on the first day (Go Live) with full access to a technical support team for project mentoring. We will organize a post-live session to answer any questions and/or concerns the team may have.

### 5. Project Close-out

SolidCAD guarantees to be with you every step of the way and that includes project close-out! Our team will go over project metrics and lessons learned including next steps for the future. We want to ensure that you are equipped for any project in BIM 360.
