

## INTEGRATING INFORMATION INTO THE DESIGN PROCESS

## DESIGNING WITH MORE DATA

### COMPANY PROFILE

Daniel Johnson Architect Inc. strives to make buildings that will be “good neighbours” - that will improve or complement their surroundings. They value planning that is clear and logical; construction detailing and material selection that are appropriate and durable. Their work includes new buildings and renovations, interiors, design studies and graphics for private and public clients.

### THE CHALLENGE

DJA was pushed to use Revit by its retail clients due to its ability to integrate the procurement equipment and materials earlier into the design process. This was a clear advantage for DJA to make the move to Revit to meet customer demands and stay ahead of the competition.

### THE SOLUTION

The SolidCAD team assisted DJA in providing the suitable pricing and financing options for the Revit product that would best meet their business needs. SolidCAD's experts were able to offer flexible and customizable training options for DJA staff, and the added value of reliable technical support.

### THE RESULTS

The DJA team was able to set up Revit template files for commercial applications which they have been able to start applying to other projects and clients. The ability to easily create 3D presentation drawings from the same working drawings is an added bonus for the retail sector.

*“Our mission is to deliver quality, consistency and efficiency in the work we deliver to clients. Revit has been a key cornerstone in fulfilling that mission, while at the same time offering the added value of BIM and three dimensional representation.”*
