Vault Professional: Autodesk Vault Filestore Replication (AVFS)

🔍 OVERVIEW VALUE

Autodesk Vault Filestore Replication (AVFS) enables organizations to support distributed engineering teams by replicating file storage across multiple geographic locations while maintaining a single, centralized data management environment within Autodesk Vault. AVFS ensures that users access files from a local replica, significantly improving performance for check-in, check-out, and large file transfers, while synchronizing changes across all sites to maintain data integrity. **The result is faster collaboration across regions, reduced network latency, and a scalable foundation for global engineering operations without compromising control or consistency.**

📋 SERVICES & DELIVERABLES

- Discovery Session with IT
- Configuration of Vault Filestore Replication

🔄 IMPLEMENTATION ROADMAP

Phase	Outcome
1	Discovery Vault Filestore Replication
2	Configuration of Vault Filestore Replication
3	Administrative Training on Vault Filestore Replication
